EXECUTIVE SUMMARY

Data-driven Full Stack Java Developer and AI & Data Science student with hands-on experience building scalable web applications, RESTful microservices, and intelligent backend systems. Proficient in Java (Spring Boot), Python (Flask), and modern frontend frameworks like React.js. Adept at optimizing database workflows, integrating AI capabilities, and collaborating in Agile environments to deliver high-performance software solutions with user interface focus, maintenance discipline, and leadership-ready execution—supporting telemedicine, elder care, and wellness use cases where secure data handling and reliable insurance workflows matter.

EDUCATION

Sri Ramakrishna Matric Hr Sec School, Perambalur 2022
10th Grade: 98.6% | 12th Grade: 80.2%

B.Tech Computer Science and Engineering (AI & DS), 2026
Hindustan University, Chennai | CGPA-8.30

SKILLS

Languages : Java, Python, JavaScript, SQL, C, C++, HTML5, CSS3
Backend Technologies : Java, Spring Boot, Spring Framework, RESTful APIs, Microservices, JWT Authentication, Maven
Frontend Technologies : React.js, TypeScript, Angular (Basic), Bootstrap, HTML5, CSS3
API & Testing Tools : Swagger, Postman, API Documentation, REST API Testing
Databases : MySQL, MongoDB (NoSQL), Database Design, Data Modeling
DevOps & Version Control : Git, GitHub, CI/CD, GitHub Actions, Jenkins (Basic)
Software Development : OOP, DSA, MVC Architecture, Agile/Scrum, Code Reviews, Debugging, Problem Solving

INTERNSHIP

Full Stack Developer, NoviTech R&D 12/2024

- Architected scalable web applications using Python, Flask, JavaScript, and MySQL in an Agile environment, supporting business operation workflows and management visibility for person-centric modules.
- Engineered secure backend APIs and optimized database queries, improving overall system response time and efficiency by 20% through targeted maintenance and performance tuning for telemedicine and elder care-style request flows.
- Utilized Git for version control and actively participated in code reviews to ensure code quality, enabling reliable QA readiness for deployments across a team member-driven release process.
- Collaborated with cross-functional teams including designers and developers to deliver scalable web solutions across the ecosystem of product features, improving wellness experience consistency for end users.
- Performed debugging, troubleshooting, and performance optimization to meet responsibility-driven delivery timelines for insurance-related backend workflows.
- Conducted code reviews and followed software development best practices to strengthen leadership habits in team execution, aligning implementation details with analyst requirements.

Web Developer, CodeBind Technologies 06/2025

- Developed responsive, user-centric web interfaces using HTML, CSS, JavaScript, and PHP with a strong user interface and clean component structure for parenting and wellness oriented user journeys.
- Integrated REST APIs and built reusable frontend components to improve UI consistency across modules, improving management of shared UI patterns and reducing integration friction for a team member workflow.
- Implemented client-side form validation and established secure data connectivity with MySQL databases, improving reliability for business workflows and supporting revenue-impacting data capture.

PROJECTS

AI-Powered Resume Analyzer & Interview Preparation Platform,

Java, Spring Boot, React.js, MySQL, REST API, JWT, Git

- Developed scalable RESTful APIs using Spring Boot and Spring Framework to support product management workflows for candidate evaluation, including analyst-review pipelines.
- Integrated Swagger and Postman for API documentation, testing, and validation to ensure consistent health check coverage for world-ready deployments.
- Designed relational database schemas and optimized SQL queries for improved performance, strengthening business valuation insights from analytics outputs tied to revenue goals.
- Implemented JWT-based authentication and role-based authorization to secure platform access and reduce operational risk for person data.
- Utilized Git and CI/CD workflows for automated deployment and version control across the global development lifecycle.
- Followed Agile development methodologies, participating in sprint planning and code reviews while providing guidance on API contracts and integration.

Digital Voting System using Blockchain, React, TypeScript, Blockchain, AI

- Developed a secure, decentralized voting platform utilizing SHA-256 hashing algorithms to ensure data immutability for global business trust and auditability.
- Implemented multi-factor authentication and biometric verification protocols to enhance system security and operational responsibility.
- Designed and integrated an AI-driven anomaly detection model to monitor and flag suspicious voting activities, addressing challenge scenarios in the voting ecosystem.

Smart Recruitment & Applicant Tracking System, Java, Spring Boot, MySQL, REST API, JWT, Bootstrap, JavaScript

- Developed secure authentication with role-based access for candidates and recruiters.
- Implemented job posting, application tracking, and candidate management workflows.
- Added resume-job matching logic to calculate fit score and support faster hiring decisions.
- Designed responsive dashboard pages for jobs, applications, and recruiter view.

CERTIFICATIONS

Java Full Stack Development, FITA Academy (2026)

Skills: Java, Spring Boot, Spring Framework, Hibernate, JDBC, REST APIs, React.js, JavaScript, HTML5, CSS3, MySQL, Git, GitHub, Maven, Agile.

Career Essentials in Generative AI, Microsoft (2024)

Skills: Python, Generative AI concepts, Prompt Engineering, Cloud Fundamentals

Cloud Fundamentals, IBM SkillBuild (2024)

Skills: Technical Specification, Emailing, Cloud Architecture, API Services, Deployment Basics

Figma Design Training, Infosys (2022)

Skills: UI/UX Design, Prototyping, Mobile App Layouts

ACTIVITIES

- Developed full stack applications during internships with frontend and backend integration, strengthening business operation readiness and responsibility while supporting telemedicine and elder care style user workflows.
- Participated in hackathons and built production-ready prototypes with creative problem-solving and measurable delivery focus for insurance and wellness themed demos.
- Built "AURA" Flutter Web UI with real-time chat functionality, emphasizing user interface responsiveness and usability for a person-to-person interaction experience.
- Active learner in Java Full Stack Development and software engineering concepts, supporting career pathing through continuous improvement and analyst-aligned requirements gathering.
